About Me

A JavaScript full-stack Web Developer all round with sound understanding of ES6 and above, as well as other JavaScript frameworks like React.Js and Next.Js. I carry along with me a two years experience in web development and I am very skilled in building an highly scalable, responsive and user-friendly website.

I am also a JavaScript guy when it comes to back-end. I am into Node.Js/Express, as well as Next.Js for back-end.

Experience

2021 -

Smart Technologies | Web Developer

*Tasked with developing company's website using Next.Js

*Creating API end points using Next Js Api Routes.

*Integrating MongoMongo oDB(atlas) into the application.

*Creating a highly scalable, user-friendly and highly responsive website.

*Proper understanding of git knowledge and basic front-end language including HTML5, CSS3 and JAVASCRIPT(ES6+).

*Good knowledge of Hosting services and domain related knowledge.

*Ability to work along with designers and other necessary teammates.

Projects

2021 -

Smart Technologies | Wifispace Website

Wifispace is a website under Smart Technologies. It highlights the services and offers of Smart Technologies. It is also a wifi service provider via hotsopt, routers, modems, broadband etc.

Appication type: It is a full stack website built in Next.Js and using Redux for state management and mongoDB(atlas) for database integration. It also features authentication through inputs of username and password and protected routes. The auths password is encrypted using Bycrypt and jwt tokens for effective developing experience as well as user experience.

2021 -

| Crypto Prediction Trading Bot

This is a website that tries to predict the rise and fall of crypto using some complex calculations at the background.

The project made use of complex crypto APIs to retrieve datas from coin-gecko and manipulating them. It also features the use of Redux for state management and the whole project is built with Next.Js.
